Falcon Endpoint Protection Enterprise

Stop breaches with enterprise-grade endpoint protection

Built to stop breaches

CrowdStrike Falcon® Endpoint Protection Enterprise sets the new standard in endpoint security with the first and only cloud-native security platform proven to stop breaches by unifying next-gen antivirus (NGAV), endpoint detection and response (EDR), managed threat hunting, and integrated threat intelligence in a single cloud-delivered agent.

Key product capabilities

AI-powered NGAV

» Protects against a broad range of threats without requiring daily and cumbersome updates

» Combines the best prevention technologies — machine learning, AI-powered indicators of attack (IOAs), exploit blocking, high-performance memory scanning, and more — to stop ransomware and fileless attacks

» Covers the gaps often left by legacy AV, and fully protects endpoints online and offline

Intelligent EDR

» Prevents silent failure by capturing raw events for automatic detection of malicious activity, providing unparalleled visibility, proactive threat hunting, and forensic investigation

» Leverages AI to detect threats faster — CrowdStrike® Signal intelligently groups related indicators and alerts into actionable, prioritized automated leads so teams know where to focus first to stop complex threats earlier

» Provides powerful response actions to contain, investigate, and remediate compromised systems on endpoints and beyond

24/7 managed threat hunting

» An elite team of security experts proactively hunts, investigates, and advises on activity in your environment to prevent missed threats and provide high-priority alerts

» Alert prioritization uniquely pinpoints the most urgent threats in your environment and resolves false positives

» Guided response provides clarity on an attack and guidance on what to do next

Device control

» Provides detailed visibility on USB device usage

» Enables granular policy enforcement for control over USB devices used in the environment

Key benefits

- Provides unparalleled real-time visibility of events and activities across endpoints and identities
- Accelerates investigation and remediation to detect stealthy attacks 24/7
- Orchestrates and automates complex workflows with CrowdStrike Falcon® Fusion SOAR to simplify security operations and accelerate response

Firewall management

» Makes it easy to create, manage, and enforce policies

» Defends against network threats, and provides instant visibility to enhance protection and inform action

Integrated threat intelligence

» Enables you to fully understand the threats in your environment and easily prioritize responses with threat severity assessment

» Eliminates guesswork so you can respond to threats decisively

» Automatically determines the scope and impact of threats found in your environment

» Provides a broad set of indicators of compromise (IOCs) for modern threat protection

Cloud-native platform

Reduces cost and complexity with a unified agent and cloud-native console

———————————————

Enables rapid deployment and operationalization — without requiring a reboot after installation

———————————————

Provides full, automated protection across endpoints without impacting end-user productivity

About CrowdStrike

CrowdStrike (Nasdaq: CRWD), a global cybersecurity leader, has redefined modern security with the world's most advanced cloud-native platform for protecting critical areas of enterprise risk — endpoints and cloud workloads, identity and data.

Powered by the CrowdStrike Security Cloud and world-class AI, the CrowdStrike Falcon® platform leverages real-time indicators of attack, threat intelligence, evolving adversary tradecraft and enriched telemetry from across the enterprise to deliver hyper-accurate detections, automated protection and remediation, elite threat hunting and prioritized observability of vulnerabilities.

Purpose-built in the cloud with a single lightweight-agent architecture, the Falcon platform delivers rapid and scalable deployment, superior protection and performance, reduced complexity and immediate time-to-value.
